

## Yokogawa at the national SCADA Conference

Yokogawa Australia will be an exhibitor at the 7th Annual National SCADA Conference, on June 16 – 17 at the Sofitel Brisbane. Yokogawa will be showcasing its FAST/TOOLS SCADA system, which is scalable from 50 to more than 1 million I/O points.

The FAST/TOOLS system is also renowned for its reliability, with more than 90% of the 5000 installations around the world in mission-critical applications on oil and gas, nuclear and infrastructure sites. Yokogawa Australia's SCADA experts will be at the Conference to demonstrate the system's capabilities and features.

“Yokogawa has been in SCADA systems for more than 30 years,” Yokogawa Australia's Managing Director, John Hewitt, said. “Here in Australia, we haven't focused significant attention on SCADA in the past. But we are now responding to the market's increasing concerns about the flexibility, cost and risk of SCADA to provide our proprietary FAST/TOOLS system, which we believe is one of the best available anywhere in the world.”
