

Objectives

To explain the functionality of the Consolidated Alarm Management Software for HIS (CAMS for HIS) in normal operation (run-time). After completion of the training participants will be able to:

- § Explain the difference between CAMS and CAMS for HIS
- § Recall and use the different type of lists on the operator station
- § Interpret the different area in the CAMS monitor
- § Use the primary CAMS functions (filtering, sorting, shelving, eclipsing and load shedding)
- § Modify the CAMS for HIS monitor layout in real-time (if security allows this)
- § Create static and dynamic filters

Who should attend?

CENTUM VP/ CS3000 engineers using the Human Interface Station (HIS) for daily operation

Prerequisite knowledge

Participants should have completed the CENTUM VP /CS3000 Operators course previously.

Programme

Day 1:

- § Difference between CAMS and CAMS for HIS
- § The CAMS concept
- § The scope of CAMS for HIS
- § Message monitor basic layout
- § Run-time aspect of CAMS (filtering, sorting, eclipsing etc)
- § Static alarm suppression
- § Exercises
- § Evaluation

Duration

1 day
