

## Objectives

To give the participant an understanding of the role played by Safety Systems for industrial production processes in preventing personal injury, environmental damage, damage to equipment and loss of production. The course will cover the terminology used for safety systems, the international standard IEC 61508 which covers all safety life-cycle activities and also the safety solutions offered by the various Yokogawa ISS safety products.

## Who should attend?

Operators, engineers etc, interested in the various aspects of safety systems for industrial production processes.

## Prerequisite knowledge Programme

None.

### Day 1:

- § Welcome and course introduction
- § Usage of safety systems
- § Safety systems terminology
- § International standard, IEC 61508
- § Introduction to ProSafe products
- § Evaluation

## Duration

1 days
