PROFIBUS is a vendor-independent and open fieldbus based on the international standard IEC61158 and IEC61784. It covers a wide range of applications in manufacturing and process automation fields. Vendor-independence and openness allow communication between devices of different manufacturers with no special interface adjustment. EJA-E PROFIBUS PA model offers more flexible instrumentation through a higher level communication capability and proposes the cost reduction by multidrop wirings with less cables.

**FEATURES**

- **Interoperability**
  PROFIBUS specifications grant the interoperability of the field instruments without preparing designated softwares for the instrument.

- **Multi-sensing function**
  EJA110E PROFIBUS PA model, for example, has three independent AI function blocks for differential pressure and static pressure.

- **Local operation interface (Applicable when digital indicator is specified)**
  In addition to being able to perform zero adjustments, the local operation interface can be used to set the Bus address and Ident number by using switch on LCD within Digital indicator code E and external adjustment screw. With this function, it is no longer necessary to use a communication device to set the field device parameters; this can be done directly on the field device.

- **Multi-signal display (Applicable when digital indicator is specified)**
  Up to four I/O signals can be alternatively displayed on the digital indicator. The block tags, the parameter names, the process units and the statuses are also displayed in order to show what the displayed signals are.

- **Alarm function**
  EJA-E PROFIBUS PA models securely support various alarm functions, such as high/low alarm, notice of block error, etc. based on PROFIBUS specifications.

- **Self-diagnostic function**
  A reliable self-diagnostic function based on the NAMUR NE107 standard detects failures in the hardware of pressure sensor, temperature sensor or amplifier assembly, measuring range setting, and communications.

- **Signal totalizer function**
  Totalized process values can be calculated using the PROFIBUS totalizer function block. This enables the EJA-E to output totalized flow rate signals for flow applications. A periodic backup function guards against the loss of data when the power supply is disrupted.

- **Supported tools**
  DTM for FieldMate
  EDD for SIEMENS SIMATIC PDM
### STANDARD SPECIFICATIONS

For items other than those described below, refer to each General Specification sheet.

**Applicable Model:**
All DPharp EJA-E series.

**Output:**
Digital communication signal based on PROFIBUS PA protocol.

**Supply Voltage:**
9 to 32 V DC for general use, flameproof type, intrinsically safe (Ex ic), or nonincendive.
9 to 24 V DC for intrinsically safe type Entity model
9 to 17.5 V DC for intrinsically safe type FISCO model

**Communication Requirements:**
Supply Voltage: 9 to 32 V DC
Current Draw: 15 mA (max)

¹: Applicable for Electrical connection code 2, 4, 7, 9, C and D .
²²: Lower limit of ambient temperature is –15°C (5°F) when /HE is specified.
<Ordering Information>
Specify the following when ordering:
1. Model, suffix codes, and option codes
2. Calibration range and unit (Scale In Lower/Upper Value);
   1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of –32000 to 32000.
   2) Specify only one unit from the table, ‘Factory Setting’.
3. Output mode (Characterization Type);
   Select ‘LINEAR’ or ‘SQUARE ROOT’.
4. Output scale and unit (Out Scale Lower/Upper value);
   When digital indicator is required, the scale range can be specified with range limit specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of –32000 to 32000. Unit display consists of 6-digit, therefore, if the specified scaling unit excluding '/' is longer than 6-characters, the first 6 characters will be displayed on the unit display.
5. Tag Number:
   Specify software tag (up to 32 letters) to be written on the amplifier memory and Tag number (up to 22 letters, or 16 letters when /N4 is specified) to be engraved on the tag plate separately.
6. Bus Address
   Specify the address between hexadecimal 0x03(3) and 0x7E(126).

[When /CD option is specified]
7. Software damping (Filter Time Const of AI function Block); Specify software damping: 0.00 to 100.00(s)
   Example: When 50 to 1000 mmH2O for calibration range and 0 to 100% output scale is required, specify the values as follows:
   Calibration range:
   Higher value 1000
   Lower value 50
   Calibration unit: mmH2O
   Output scale:
   Higher value 100
   Lower value 0
   Unit of output scale: %
   Output mode: Linear

Explanation of PROFIBUS PA parameters:
(1) Characterization Type: Type of Linearization, ‘LINEAR’ or ‘SQUARE ROOT’ can be selected.
(2) Scale In Lower/Upper Value: The value set as calibration range should be entered to this parameter. This is the input conversion of the Pressure using the high and low scale.
(3) Pressure Unit: The unit of calibration by sensor, this is used as the unit of Scale In.
(4) Out Scale Lower/Upper value: Output scaling parameter. Set the output value which corresponds to 0% value and 100% value of the calculation in the AI1 function block. The value set as output scale should be entered to this parameter. When integral indicator is required, this output is shown on LCD.

<Related Instruments>
The customer should prepare instrument maintenance tool, terminator, Profibus power supply etc.
