Environmental Policies

Rota Yokogawa persecutes in accordance with the Yokogawa philosophy a social contribution to the preservation of the earth by preserving the environment.

The organizational structure should ensure that the necessary information, measurements and controls in this context can be realized and that the environmental goals are pursued economically. Following environmental activities for realization a sustainable world have been defined by Rota Yokogawa:

1. to maintain and improve the established environmental management system and clearly define appropriate competences and responsibilities for all environmental activities.

2. to support environmental prevention by establishing influenceable environmental goals, such as mitigation of climate change and meaningful use of resources.

3. comply with all laws, regulations and other requirements designed to protect the environment, and to protect and preserve the environment in a preventive manner.

4. sensitize environmental awareness of all employees in order to promote their own responsibility for environmental protection in the occupational domain as well as in the private sector.

5. encourage employees to use the resources of nature economically to prevent global warming and other negative impacts wherever possible. These include, for example, the reduction of waste or, the recycling of residues into the material cycle and the determination of its energy consumption.

6. avoid, as far as possible, the use of materials containing toxic substances that adversely affect the environment (such as ozone depletion) and replace them with harmless substances or safe technologies that pose no risk to the environment.
