Release #: 740

### **Yokogawa Introduces a new 30A, 50 MHz Current Probe for its Digital Oscilloscopes**

Yokogawa Corporation of America introduces a new DC - 50 MHz current probe, model number 701933, that works with its entire family of DL digital oscilloscopes and digital recorders. The new probe measures continuous current signals up to 30 A<sub>rms</sub> and handles short bursts of current up to 50 A<sub>peak</sub>. The 701933's jaws open and can be positioned around any conductor up to 5mm in diameter, so there is no need to break open the circuit-under-test in order to measure current.

Power for the 701933 comes directly from any Yokogawa scope via the scope's probe power ports, so there is no need for an additional cumbersome power supply for the probe. However, Yokogawa does sell two and four-port probe power supplies so that the probe can be used with any vendor's oscilloscope.

The 701933 current probe is available now. The price of the probe is \$1,900.

Yokogawa offers three other open-jaw type oscilloscope current probes that can be powered directly from the scope's probe power ports:

- 701932: DC – 100 MHz. 30 A<sub>rms</sub> max. \$2,800
- 701930: DC – 10 MHz. 150 A<sub>rms</sub> max. \$2,800
- 701931: DC – 2 MHz. 500 A<sub>rms</sub> max. \$3,000

## **About Yokogawa Corporation of America**

Yokogawa Corporation of America is the North American unit of \$3 billion Yokogawa Electric Corporation, a global leader in the manufacture and supply of instrumentation, process control, and automation solutions. Headquartered in Newnan, Georgia, Yokogawa Corporation of America serves a diverse customer base with market-leading products including analyzers, flowmeters, transmitters, controllers, recorders, data acquisition products, meters, instruments, distributed control systems, and more.
