Yokogawa Wins Main Instrumentation and Controls Contract for South Hook LNG Terminal

Tokyo, Japan –Yokogawa Electric Corporation is proud to announce the award of an approximately four million pounds sterling lump sum turnkey contract to Yokogawa System Center Europe to provide the main instrumentation and controls for the new South Hook LNG Receiving Terminal that is to be built near Milford Haven, Wales, UK.

The South Hook LNG Terminal will be the largest liquefied natural gas (LNG) terminal in Europe. This new state of the art facility will provide a significant new source of natural gas to the UK's national transmission network.

Working in conjunction with the main engineering, procurement, and construction (EPC) contractor, Chicago Bridge & Iron Company NV, Yokogawa will be responsible for delivering its class-leading integrated control, safety, and management information system (MIS) solution. The solution will utilize Yokogawa's CENTUM CS3000 R3 distributed control system (DCS); the ProSafe range of emergency shutdown (ESD), high integrity pressure protection (HIPPS), and fire & gas detection safety systems; and the Exaquantum MIS.

Will de Groot, Managing Director of Yokogawa System Center Europe, says "Over the past 12 months we have been working closely with the South Hook Terminal client, supporting their front end engineering design (FEED) activities and utilizing the expertise we have gained from the implementation of many similar solutions across the globe. Time after time Yokogawa have proved that projects such as this need not only the best available solution

for today's operational and business needs but one that will evolve and keep delivering over the entire project lifecycle."

About South Hook LNG Terminal Company Ltd.

South Hook LNG Terminal Company Ltd. is owned by Qatar Terminal Company Limited (70%) and ExxonMobil Qatargas (II) Terminal Company Limited (30%). Qatar Liquefied Gas Company Limited (II) will provide LNG from a new liquefaction facility in Qatar and transport the LNG to the UK using a fleet of new LNG carriers commissioned for this project.

About Yokogawa

Yokogawa's global network of 18 manufacturing facilities, 82 affiliate companies, and over 650 sales and engineering offices spans 28 countries. Since its founding in 1915, the US\$4 billion company has been engaged in cutting-edge research and innovation, securing more than 7,000 patents and registrations, including the world's first digital sensors for flow and pressure measurement. Industrial automation and control, test and measurement, information systems, and industry support are the core businesses of Yokogawa. The company is experienced in providing integrated control system solutions covering the entire LNG cycle, from liquefaction through to transport and regasification, and Yokogawa equipment currently controls in excess of 60 % of these facilities worldwide.
