Yokogawa Introduces Revolutionary Advances to Combustion Based Processes Operational Safety and Long Term Sustainability..... CombustionONE™

Sugar Land, Texas – Yokogawa Corporation of America is pleased to announce the introduction of a new integrated solution for combustion based processes.

CombustionONE™ has been created in response to the overwhelming demands of the refining, chemical, specialty chemical, power, metals and pulp & paper markets where combustion control and combustion management have a more significant impact than ever before.

Fired heaters, dryers, heat exchangers, boilers and other pieces of plant equipment pose a serious threat to day to day safety, as well as, represent poor energy efficiency in most cases. Fired heaters for example are the largest overall energy consumer in the process industries and represent a tremendous opportunity for energy savings. Fired heaters also present huge safety risks during startup and shutdown. CombustionONE delivers an overwhelming value proposition for justifying investments via increased safety, reduced energy costs, improved regulatory compliance and lower asset

sustainability life cycle costs. Yokogawa achieves this by combining world class automation technology with process knowledge expertise, applications solutions and on ongoing “wellness management” to keep the production asset alive and well for many years to come.

Craig Ferris, Yokogawa Corporation of America Director of Business Development and CombustionONE Global Center of Excellence Manager said “Our customers have had issues and concerns with combustion centered processes for years. CombustionONE was created to take the many concerns in regard to these processes that have been disconnected and provide a solution that ensures safety, operational excellence, energy stewardship/compliance and ongoing asset sustainability through **ONE** deliverable from Yokogawa”.

About Yokogawa Corporation of America

Yokogawa Corporation of America is the North American division of \$ 4 billion Yokogawa Electric Corporation, a global leader in the manufacture and supply of instrumentation, process control and automation solutions. Headquartered in Sugar Land , Texas, Yokogawa Corporation of America offers a variety of clients with leading products on the market as analyzers, flowmeters, transmitters, controllers, recorders, data acquisition products, measuring instruments, distributed control systems, and more.
