Release #: 998

Yokogawa Corporation of America announces the release of WELL PRODUCER™ – an automation solution for the digital gas field well control application –

WELL PRODUCER is a packaged solution to automate and manage gas wells simpler and easier than current practice. WELL PRODUCER consists of a low power STARDOM FCN-RTU, with all the necessary control and flow computer functions for gas wells pre-configured. All parameter settings can be configured by a built-in WEB server and an open MODBUS communication allows connection to any SCADA Host. This makes it an ideal drop-in replacement for legacy RTUs. Users can choose either a standard configurable WELL PRODUCER or alternatively, customize the WELL PRODUCER solution to their own needs. The STARDOM FCN-RTU comes with an API21.1 compliant flow computer and gas well controller in one device. A single controller is able to configure up to 2 well facilities or more together with choke valve control, separator control, plunger lift control, tank control, other equipment control and shutdown logic. There is a huge benefit to use this RTU for multi-well sites, as there are many interactions not only between the wells but also with other equipment.

As the unconventional natural gas resources opportunities, particularly shale gas, are growing in North America, Yokogawa's solutions play an important role helping customers meet the challenges of reducing both CAPEX and OPEX costs, while enhanced built-in technologies

increase production. Yokogawa's contribution to the digital oil and gas field concept as proposed by many of the major Energy companies is in simplifying and integrating the automation of the wellhead.

Yokogawa total solutions include not only the well site, but also the injection, pipeline, compressor station, and the process plant facility. Yokogawa's experience for these applications can be integrated to optimize the overall operation capability and maintainability, to increase production and reduce costs safely.

Yokogawa is being selected by the major energy companies as its automation partner because Yokogawa focuses on delivering highly reliable solutions – from digital field instrumentation to RTU's, SCADA, DCS, Safety Systems, Asset Management solutions and integrated digital oil and gas field applications. Yokogawa offers a wide variety of sensors and controllers that are used to monitor and operate the digital oil & gas field, as well as engineering and configuration services and support, providing a turnkey automation solution.

About Yokogawa Corporation of America

Yokogawa Corporation of America is the North American division of \$3.4 billion Yokogawa Electric Corporation, a global leader in the manufacture and supply of instrumentation, process control, automation services and solutions. Headquartered in Sugar Land, Texas, Yokogawa Corporation of America offers a variety of clients with leading products on the market such as process analyzers, flowmeters, transmitters, controllers, recorders, data acquisition products, measuring instruments, distributed control systems, and more.
