AXFA14 Magnetic Converter for Remote Flowtube

GS 01E20C02-02E-A

The AXFA14 magnetic converter has been developed leveraging Yokogawa's decades long experience in magnetic flowmeters. The AXFA14 continues the tradition of high quality and reliability that has become synonymous with the Yokogawa name and features an even higher level of performance and increased functionality than previous models.

Retaining all the features and functions of the Admag series of converters, the AXFA14 also offers an enhanced dual frequency excitation method, unique to Yokogawa, as an option for difficult applications as well as new diagnostics to detect electrode coating. When combined with a flowtube utilizing the optional replaceable electrode design, the user benefits through the ability to schedule maintenance for reduced process downtime and in turn a lower total cost of ownership.

■ FEATURES

Refer to GS 01E20F02-01E for FOUNDATION Fieldbus Communication type and GS 01E20F12-01E-A for PROFIBUS PA communication type.

• **Optional enhanced dual frequency excitation method**

The user can select a 165 Hz high frequency component for very high concentration slurries to ensure greater stability and quicker response.

• **Minimum fluid conductivity of 1 μ S/cm**

With the newly designed AXF flow converter, improvements to the input circuit now permit the measurement of fluids with conductivity as low as 1 μ S/cm.

• **Diagnostics to detect insulating coatings on the electrodes**

By constantly monitoring the change in the impedance of the electrode circuit due to the build-up of insulating coatings, the AXF converter will display 4 different levels of coating and provide an alarm function.

• **Improved accuracy specification**

The standard performance specification for AXF is 0.35% of reading. An optional high accuracy calibration rated at 0.2% of reading is also available.

• **Three line display with infrared switches**

The LCD indicator employs a large, backlit, full dot matrix display. One to three lines are available and these can be programmed to indicate a wide variety of display possibilities, including a bar graph for flow rate indication and a graphical representation of the extent to which the electrodes may be coating. Infrared switches permit programming through the glass without the need to open the enclosure cover.

• **High speed pulse output**

The pulse output can be programmed up to 10,000 pulses/second for high-speed applications such as short batch processes.

• **"Easy Setup" Parameters**

The most frequently used parameters are arranged in one location for easy, quick access.

■ STANDARD SPECIFICATIONS

Excitation Method

- Standard dual frequency excitation:
Size 2.5 to 400 mm (0.1 to 16 in.)
Combined with AXF Remote Flowtube
- Enhanced dual frequency excitation:
Size 25 to 200 mm (1.0 to 8.0 in.)
Combined with AXF Remote Flowtube
(Option code HF2)

Input Signal:

One Status Input: Dry contact
Load resistance: 200 Ω or less (ON), 100 k Ω or more (OFF)

Output Signals(*1):

- One Current Output: 4 to 20 mA DC (load resistance: 0 to 750 Ω , including cable resistance)
- One Pulse Output (*1):
Transistor contact output (open collector)
Contact capacity: 30 V DC (OFF), 200 mA (ON)
Output rate 0.0001 to 10,000 pps (pulse/second)
- One Alarm Output (*1):
Transistor contact output (open collector)
Contact capacity: 30 V DC (OFF), 200 mA (ON)
- Two Status Outputs (*1):
Transistor contact output (open collector)
Contact capacity: 30 V DC (OFF), 200 mA (ON)

Communication Signals:

BRAIN or HART communication signal
(Superimposed on the 4 to 20 mA DC signal)

Communication Line Conditions:

Load resistance: 250 to 600 Ω (including cable resistance)
Distance from power line: 15 cm (6 in.) or more (Parallel wiring should be avoided.)

BRAIN:

Communication Distance:

Up to 2 km (1.25 miles), when polyethylene insulated PVC-sheathed cables (CEV cables) are used.
Communication distance varies depending on the type of cable and wiring used.

Load Resistance: 250 to 600 Ω (including cable resistance)

Load Capacitance: 0.22 μ F or less

Load Inductance: 3.3 mH or less

Input Impedance of Communicating Device:

10 k Ω or more (at 24 kHz)

HART:

Load Resistance: 250 to 600 Ω (including cable resistance)

Note 1: See "Terminal Wiring" on page 6 for possible input/output combinations.

Data Security During Power Failure:

Data (parameters, totalizer value, etc.) storage by EEPROM. No back-up battery required.

Indicator:

Full dot-matrix LCD (32 \times 132 pixels)

Lightning Protector:

A lightning protector is built into the excitation current output, the current output, pulse/alarm/status input and output terminals. If option code A is selected, the lightning protector is built into the power terminals.

Protection:

IP67, NEMA4X

Coating:

Case and Cover: Polyurethane corrosion-resistant
Coating Color: Mint green (Munsell 5.6 BG 3.3/2.9 or its equivalent)

Converter Material:

Case and Cover: Aluminum alloy

Mounting: 2 inch pipe

Electrical Connection:

ANSI 1/2 NPT female

Terminal Connection:

M4 size screw terminal

Grounding:

Grounding resistance 100 Ω or less

When option code A is selected, Class C grounding (grounding resistance 10 Ω or less) shall be applied.

* In case of explosion proof type, the protective grounding must be connected to a suitable IS grounding system.

Converter Interchange:

In instances where the AXFA14 converter has been paired with a remote AXF flowtube and the converter is changed to the AXFA11 converter, a flow calibration must be performed to arrive at the meter factors for the new combination. The AXFA14 converter can only be combined with remote flowtubes size 2.5 - 400 mm (0.1 to 16 in.) For 250 mm (10 in.) or larger used in low conductivity fluids or high concentration slurry, please use the AXFA11 converter.

Functions

How to Set Parameters:

The indicator's LCD and three infra-red switches enable users to set parameters without opening the case cover. Parameters can also be set by means of the HHT.

Displayed Languages:

English, Japanese, German, French, Italian, and Spanish.

Instantaneous Flow Rate/Totalized Value Display

Functions (for models with an indicator):

The full dot-matrix LCD enables user selection of displays from one line to three lines for:

- Instantaneous flow rate
- Instantaneous flow rate (%)
- Instantaneous flow rate (bar graph)
- Current output value (mA)
- Totalized value
- Tag No.
- Results of electrode coating diagnostics

Totalizer Display Function:

For forward/reverse ranges, the totalized values of the flow direction (forward or reverse) and the flow rate are displayed on the indicator together with the units. The difference values between the forward and reverse flow rate totalized values can be displayed. The reverse flow rate is not counted for a forward single range.

Damping Time Constant:

Time constant can be set from 0.1 second to 200.0 seconds (63% response).

Span Setting Function:

Span flows can be set in units such as volume flow rate, mass flow rate, time, or flow rate value. The velocity unit can also be set.

Volume Flow Rate Unit: kcf, cf, mcf, Mgal (US), kgal (US), gal (US), mgal (US), kbbbl (US)*, bbl (US)*, mbbl (US)*, μ bbl (US)*, Ml (megaliter), m³, kl (kiloliter), l (liter), cm³

Mass Flow Rate Unit (Density must be set.): klb (US), lb (US), t (ton), kg, g

Velocity Unit: ft, m (meter)

Time Unit: s (sec), min, h (hour), d (day)

* "US Oil" or "US Beer" can be selected

Pulse Output:

Scaled pulse can be output by setting a pulse weight.

Pulse Width: Duty 50% or fixed pulse width (0.05, 0.1, 0.5, 1, 20, 33, 50, 100 ms) can be selected.

Output Rate: 0.0001 to 10,000 pps (pulse/second)

Multi-range Function:

Status input enables the switching of up to two ranges.

For automatic range switching, the status of up to four ranges can be shown via status outputs and on the indicator.

Forward and Reverse Flow Measurement Functions:

Flows in both forward and reverse directions can be measured. The status is shown via status outputs and on the indicator during the reverse flow measurement.

Totalization Switch:

If a totalized value becomes equal to or greater than the set value, a status output is generated.

Preset Totalization:

A parameter setting or status input enables a totalized value to be reset to a preset value or zero.

0% Signal Lock:

Status input fixes the instantaneous flow rate display, current output, pulse output, and flow rate totalization to 0%.

Alarm Selection Function:

Alarms are classified into System Alarms (hard failures), Process Alarms (such as 'Empty Pipe', 'Signal Overflow' and 'Coating Alarm'), Setting Alarms, and Warnings.

Whether alarms should be generated or not can be selected for each item. The current output generated for an alarm can be selected from among 2.4 mA or less, fixed to 4 mA, 21.6 mA or more, or HOLD.

Alarm Output:

Alarms are generated only for the items selected via the 'Alarm Selection Function' if relevant failures occur.

Self Diagnostics Functions:

If alarms are generated, details of the System Alarms, Process Alarms, Setting Alarms and Warnings are displayed together with descriptions of countermeasures.

Flow Upper/Lower Limit Alarms:

If a flow rate is greater or smaller than the set value, this alarm is generated. In addition, two upper limits (H, HH) and two lower limits (L, LL) can be set.

If a flow rate is greater or smaller than any of the set values, the status is output.

Electrode Coating Diagnostics Function:

This function enables monitoring of the coating of insulating substances on the electrodes. Depending on the status, users are notified by a warning or an alarm via status outputs. If replaceable electrodes are used, they can be removed and cleaned if coating occurs.

HAZARDOUS AREA CLASSIFICATION

FM:

Explosion proof for Class I, Division 1, Groups A, B, C & D.
Dust-ignition proof for Class II/III, Division 1, Groups E, F & G.

“SEAL ALL CONDUITS WITHIN 18 INCHES”

“WHEN INSTALLED IN DIV. 2, SEALS NOT REQUIRED”

Excitation Circuit: 140V max

Enclosure: NEMA 4X

Temp. Code: T6

Ambient Temp.: -40°C to +60°C (-40°F to +140°F)

Note: Installation shall be in accordance with the manufacturer's instructions and National Electric code, ANSI/NFPA-70.

CSA:

Maximum Power Consumption:

Combined with AXF Remote Flowtube: 12 W

Insulation Resistance (*1):

- 100 MΩ between power terminals and ground terminal at 500 V DC
- 100 MΩ between power terminals and each output/status input terminal at 500 V DC
- 20 MΩ between ground terminal and each output/status input terminal at 100 V DC
- 20 MΩ between output/status input terminals at 100 V DC

Withstand Voltage (*1):

- 1350 V AC between power terminals and ground terminal for two seconds
- 160 V AC between excitation terminals and ground terminal for two seconds
- 200 V AC between excitation terminals and each output/status input terminal for two seconds

CAUTION

*1: Before performing the Insulation Resistance Test or the Voltage Breakdown Test, disconnect the ground terminal if the power terminal has a lightning protector (option code A). Following the relevant test, wait for more than 10 seconds after the power supply has been turned off before removing the cover. After testing, be sure to use a resistance for discharge and return the short bar to its correct position. Screws must be tightened to a torque of 1.18 N-m or more. After closing the cover, the power supply can be restored.

Safety Requirement Standards:

- EN61010
- Altitude at installation site: Max. 2000 m above sea level
- Installation category based on IEC1010: Overvoltage category II ("II" applies to electrical equipment which is supplied from a fixed installation-like distribution board.)
- Pollution degree based on IEC1010: Pollution degree 2 ("Pollution degree" describes the degree to which a solid, liquid, or gas which deteriorates dielectric strength or surface resistivity is adhering. "2" applies to a normal indoor atmosphere.)

EMC Conformity Standards:

Signal Cable: Model AXFC

Note:

- The cable is constructed with double shielding over the two conductors, and uses heat-resistant vinyl as the outer covering material.
Finished diameter: 10.5 mm (0.41 in.)
Maximum temperature: +80°C (+175°F)
- Not necessary to order the above cable for submersible type flowtube because the flowtube is wired with 30 m (98 ft) cable.
- Excitation cable is supplied by the customer.

Recommended Excitation, Power and Output Cable:

Use polyvinyl chloride insulated and sheathed control cable or Polyvinyl chloride insulated and sheathed portable power cables.

- Outer Diameter: 6.5 to 12 mm (0.26 to 0.47 in.)
- Nominal Cross Section: 0.5 to 2.5 mm²

ORDERING INFORMATION

Note 1: When ordering a remote flowtube and/or a remote converter, specify the flow span, unit, pulse weight, and totalizer display pulse weight.

These parameters will then be set in the combined converter before shipment.

Note 2: Some options, if ordered, require the relevant specifications be supplied.

1. Model, specification and option codes.
2. Tag number.

Each tag number can be specified up to 16 characters in a combination of letters (upper or lower case), numbers, “-” and “.”. If specified, the tag number is inscribed on the product’s name plate and tag plate (if optional code SCT is selected). For HART protocol, up to 8 characters can be specified.
