The high performance differential pressure transmitter model EJA130A can be used to measure liquid, gas, or steam flow as well as liquid level, density and pressure. It outputs a 4 to 20 mA DC signal corresponding to the measured differential pressure. Model EJA130A also features remote setup and monitoring through communications with the BRAIN™ terminal and CENTUM CS™ or H9262 XL™ or HART® 275 host.

## STANDARD SPECIFICATIONS

URL is defined as the Upper Range Limit from the table above.

### Zero Adjustment Limits
Zero can be fully elevated or suppressed, within the Lower and Upper Range Limits of the capsule.

### External Zero Adjustment
External zero is continuously adjustable with 0.01 % incremental resolution of span. Span may be adjusted locally using the digital indicator with range switch.

### Mounting Position Effect
Rotation in diaphragm plane has no effect. Tilting up to 90 ° will cause zero shift up to 0.4 kPa \(\{1.6 \text{ inH}_2\text{O}\}\) which can be corrected by the zero adjustment.

### Output
Two wire 4 to 20 mA DC output with digital communications, linear or square root programmable. BRAIN or HART FSK protocol are superimposed on the 4 to 20 mA signal.
Failure Alarm
Output status at CPU failure and hardware error;
Up-scale: 110%, 21.6 mA DC or more (standard)
Down-scale: -5%, 3.2 mA DC or less

## Optional Codes

The '*' marks indicate the most typical selection for each specification. Example: EJA130A-DM55A-92NA. The '*' marks indicate the construction materials conform to NACE material recommendations per MR01-75. For the use of SUS316 material, there may be certain limitations for pressure and temperature. Please refer to NACE standards for details.

- **1**: Indicates material of cover flange. Material of process connector is SCS14A (SUS316 equivalent).
- **2**: Diaphragm material is Hastelloy C-276 or ASTM N10276. Other capsule wetted parts materials are SUSF316L, SUS316L or ASTM grade 316L.
- **3**: If necessary, specify Mounting bracket code C, D or K.
- **4**: If necessary, specify Mounting bracket code A, B or J.
- **5**: Lower limit of ambient and process temperature is ~15°C.
- **6**: Not applicable for Output signal code F and G.
- **7**: Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user’s process media.
  Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.
- **8**: SUS316 or ASTM grade 316.
