Overview

Two types are available explosion-proof direct in situ zirconia oxygen analyzer. Model ZR22S/ZR402G is a separate type which consists of the ZR22S explosion-proof detector and the ZR402G non-explosion-proof converter. Model ZR202S is an integrated type which combines a probe and a converter. Separate and integrated type Zirconia oxygen analyzers do not need a sampling device, and allow direct installation of the probe in the wall of a flue or furnace to measure the concentration of oxygen in the stack gas.

The converter displays the cell temperature and cell emf in addition to the oxygen concentration. This analyzer is most suitable for monitoring combustion and controlling the low-oxygen combustion of various industrial furnaces in explosive atmosphere at petroleum refinery, petrochemical plant, and natural gas plant.

Features:

- The built-in heater assembly of the probe can be replaced on site, reducing maintenance costs.
- The probe uses a long-life, high-reliability Zirconia sensor.
- The separate type converter ZR402G incorporates a LCD touch-screen for ease of operation.
- The integrated type ZR202S integrates both probe and converter, to reduce wiring, piping, and installation costs. The ZR202S uses an optical switch for ease of operation at the site.
- Remote maintenance using digital communications (HART) reduces maintenance costs. *1

Application Example:
Separate and integrated type Zirconia Oxygen Analyzers

- Large, medium and small boilers (boilers for power generation: heavy oil, gas or coal)
- Various industrial furnaces (refinery process/iron manufacture heating furnace, coal kiln, and black liquid recovery boilers)

For other applications, refer to TI 11M12A01-01E.

- May not be applicable corrosive gas such as ammonia and chlorine.
